CommScope

CommScope® German 2-Port Faceplate for Foiled Twisted Pair (FTP) Applications – EMEA Only

CommScope introduces the M12GER-FTP 2-port modular furniture German Faceplate. This new faceplate solution for Germany can accommodate all Foil Twisted Pair (FTP) modules for CommScope networking solutions. Unshielded Twisted Pair (UTP) and fiber modules may be deployed as well. The M12GER-FTP provides a grounding solution for FTP and its angle feature can provide a solution that will not cause kinking with the size of today's larger cables when looped in an electrical box while using conduit. Dust shutters offer protection for avoiding leaf spring contamination.

The M12GER-FTP faceplate accepts two high-density modules and is designed specifically for the German market. The faceplate can be mounted into a German standard electrical box and it features a provision for labelling above the port openings.

Ordering Information:

Material ID	Product Number	Description
760085993	M12GER-FTP-262	Faceplate, German 2-port (FTP)
